Index

Course Objectives	31
Chapter 1.....	35
Understand and use essential tools.....	35
GNU/Linux Distribution:	35
Linux distributions from another point of view.....	35
Linux Installation from My Book(RHCSA) and show in ACT.(Installation of CentOS 6.6)	36
Connect via putty to server	36
Server authentication	38
User authentication.....	39
cat users and password files.....	40
search in cat	52
pwd for print working directory	53
who for current logged in users	53
after disconnecting from putty	53
discuss collumns	53
whoami vs. who am i	54
change password:	54
create user	55

differences between su and su -: run env	58
skel directory	58
ugo	59
ls -al fields.....	70
File permissions is displayed as following;.....	71
ls command	72
Directories in Linux.....	72
Help for Command:	73
1: --help or -h	74
2.whereis --search default path	82
3.whatis	84
4.which	84
5.man	85
Different types of manual	88
Note: man -k list	90
Note: summerize description and get count of manual type:..	92
tell apropos summary lettes: apropos dmid	97
7.info.....	99
tree	99
mkdir and rmdir.....	99
rm.....	99
cd	100
cd -.....	100
mv and cp.....	101
du --disk usage	101
cat	106
tail and head	106
touch.....	106

Index

5

grep	107
dd	107
backup MBR (Master Boot Record).....	108
get image from floppy.....	109
search in logs	109
find	109
tar.....	118
zip and unzip.....	120
--zip level.....	120
Editors	122
vi and vim.....	122
Text Entry Commands (Used to start text entry)	123
The following commands are used only in the commands mode.	123
Cursor Movement Commands	123
Exit Commands.....	124
Text Deletion Commands	125
Yank (has most of the options of delete)-- VI's copy command	125
Paste (used after delete or yank to recover lines.).....	125
File Manipulation Commands.....	126
Other Useful Commands	127
Inode.....	128
stat	128
Links.....	129
Execution:	129
Naming file in linux.....	130
Relational Addressing	130

6 RHCSA دستورات، کدها، مثال ها و سناریوهای عملی اجرا شده در مدرک بین‌المللی لینوکس

Types of files	131
Regular Expressions: sed,cut and awk	141
Regex with sed	142
Examples Provided from LPIC-1 (101,102) Book	142
Regex with cut.....	149
Regex with AWK	151
Functions in awk.....	162
Process	169
some expression:	169
1:ppid , pid	169
2:kill	172
3:zombie --his father is dead	172
4:process -->(ram,cpu) , priority of usinf resources.....	172
5:Status of process: page 331.....	173
6: user that running process.....	174
7: Swapping	174
8: commands: ps, top, nice, renice	174
ps command	174
top command.....	179
background and foreground process	179
kill.....	181
signal number : 0,2,3,9,15,24,26	181
pgrep.....	181
Priorty in process	189
statistics in memory	195
/proc folder	195
vmstat	198
fuser : -- identify processes using files or sockets	201

Index

7

lsof -- list open files	207
/proc	214
installation Types:	234
table of extensions	235
tar	235
install from source code package	235
install from rpm	236
switches	236
Example:	236
verify package.....	241
Chapter 2.....	243
Operate running systems	243
Boot Sequence.....	243
Run Levels.....	246
cat /etc/inittab	246
Sample:	251
service start stop restart 	258
tty	258
shells.....	259
rc.sysinit.....	261
fstab	261
rc.local	262
etc/X11/prefdm.....	263
/boot directory	264
Runlevels	267
/etc/inittab	268
actions:	269

services and runlevels	269
type of services.....	272
pstree.....	273
same user and group id	273
reboot ,halt , poweroff	273
shutdown switches	276
modules --remove needs for recompiling kernel	276
modprobe --search and install modules.....	277
insmod	278
LOG in Linux.....	279
important log file	282
messages	283
utmp	294
wtmp	294
last, lastb	294
dmessg.....	294
logrotate service	296
syslog server	302
My sample of syslog	306
Chapter 3.....	309
Configure local storage	309
Important Expressions.....	309
1.inode.....	309
2.character device and block device	310
3.file system in linux	310
4.Ext2: fast symbolic links.....	310
5.swap fs.....	310

6.proc fs	310
7.Journaling-->LOG	310
8.fsk	310
9.ext3,jfs, Reiserfs has Journaling.....	310
10.ReiserFS -->slow	310
11.XFS: High Volume Capacity, B+Tree,	310
12.EXT3: ext2fs + Journaling.....	310
13.Network FS: NFS, SMB.....	310
14.Encrypted Fs	310
15.windows partitions: vfat , ntfs.....	310
16.ext2,ext3,ext4 Diffrences.....	310
17.Superblock.....	310
mount and unmount	311
18.virtual fs : procfs , sysfs , tmpfs ,...--in ram and after restart viped	313
19. /etc/fstab.....	313
mount command	314
mount -t TYPE device/directory mount_point	316
Syntax	322
For CDROM.....	322
umount busy: fuser , lsof.....	322
Manual of mount.....	322
/etc/fstab.....	332
/etc/mstab --current mounter fs	333
fdisk	334
Primary and Extended	337
switches.....	337
4 Primary partitions --> Extended: logical	337

add third hard :sdc	337
Parted	361
df.....	364
UUID	366
SuperBlock.....	368
fsck.....	371
alternative super block	372
exit status	373
auto fsck	373
create swap file	374
create swap partition	374
in memory system files: temporarily and delete after reboot	375
NFS Server Configuration	375
NFS Concepts.....	375
NFS Installation.....	375
Server configuration.....	376
/etc/exports.....	376
Client configuration	377
For fstab.....	377
Firewal configuration for nfs	378
nfs port	384
portmap port.....	385
nfsstat	387
Samba Sharing.....	409
Samba Features	409
Samba 3.x Provides:	409
Samba emulates Windows Servers Using SMB protocol.....	409
Samba packages	410

Includes daemons:.....	410
1.smbd TCP (139/445(CIFS)).....	410
2.nmbd UDP (137/138) - Netbios Name Registration/Sessions	410
3.winbind- mapping of users/groups between Linux/Unix and Windows(AD).....	410
Execution:.....	410
Browsing.....	417
*=DMB (Domain Master Browser) : collating browse list for entire subnets (multiple) --usually the pdc	417
+LMB (Local Master Browser) : collating browse list for given subnet.....	417
Execution:.....	417
Note: Netbios name are 16 characters in length and this name can get from broadcast address or WINS Server that contains netbios name database.	421
Examples:	422
Key Client Utilities:	423
1. smbtree - network neighborhood text utility.....	423
Execution:.....	423
Important Note: for seeing shares you must enable guest user.	426
2. smbclient - provides an FTP-like interface to SMB/CIFS servers	439
Note: Most, if not all, Samba clients operate in case-insensitive mode	440

Note: when in smbclient interactive mode, prefix commands with '!' to execute locally on client, otherwise commands run on server.....440

Execution:.....441

smbget.....451

Note: if had error update bellowing file:.....452

name resolve order (G)452

3. smbtar - facilitates backups of remote shares454

Execution:.....454

mount cifs and ssh partitions454

Enter your Windows username and password in the file:457

Mount during login instead of boot458

Slow shutdown due to a CIFS/Network Manager bug459

Installing SSHFS On Ubuntu/Debian459

Note: if cifs module not installed do this:460

Join Netbios WORKGROUP461

Note: change browseable = no to yes to browse /root directory in smb.conf464

WINS Clint.....466

Install wins server in winsows server466

Samba Name resolution order:466

Share Level Security.....467

Execution:.....467

A publicly accessible directory, but read only, except for people in the "root" group469

A publicly accessible directory, but read only, except for people in469

Execution on Windows:.....473

public read	473
public write.....	474
private write:Mixed: Share Level and User Level Security	475
Hidden Share	477
Print - share level security	480
Note: after adding printer run:.....	482
SWAT	486
Execution:.....	486
Note:swat contorolled by xinetd.....	486
Note: set disable = no in swat file	497
##### Global Section	498
realm (G).....	498
guest account (G)	499
public.....	499
guest ok (S)	500
only guest	500
guest only (S)	500
write list (S).....	501
valid users (S).....	501
hosts allow (S).....	502
os level (G)	504
local master (G)	505
domain master (G).....	505
#####Global advanced config	507
map to guest (G).....	507
create mask (S)	509
security mask (S).....	510
directory mask (S).....	511

14 **RHCSA** دستورات، کدها، مثال ها و سناریوهای عملی اجرا شده در مدرک بین‌المللی لینوکس

smb ports (G).....	512
Note : another way getting pid of nmb and smb processes....	512
##### Swat shares.....	513
admin users (S).....	513
read list (S).....	514
force user (S).....	514
User Level Security.....	515
Security Modes:.....	515
1. Share-Level.....	515
2. User-Level.....	515
smb passwd file (G).....	516

Chapter 4..... 519

Create and configure file systems.....	519
ping command.....	519
network configuration.....	533
sshd ,sftp,scp.....	548
mount cifs and ssh partitions.....	551
/etc/resolv.conf.....	557
set proxy.....	558
route.....	558
Default gateway.....	559
Cached routes.....	560
ip forward.....	562
static route.....	564
download from cmdline.....	564
netstat command.....	565
-r, --route display routing table.....	574

/etc/hosts	584
DNS Concepts	584
Why we need DNS Server?	584
Withot DNS Server.....	584
Zone files and DNS Server	586
how dns works.....	588
DNS Cofiguration	608
My Testing Environment:	608
Requirement Packages:	609
Configuration Files Used:.....	609
Port & Protocols Used:53, UDP	610
Setup Master DNS Server	610
Installing and Configuring Bind.....	620
Following are the explanation of each configuration we used in above file.	623
Start the named service and make it persistent.....	635
Finally, test the configured Master DNS zone files (forward and reverse), using dig & nslookup tools.	636
For Reverse Query	638
Setup Slave DNS Server	640
Configure Client Machine	644
Understaing the dig Output:.....	646
schedling with (at, batch, cron).....	647
cron.....	649
Examples.....	650
Examples Of crontab Entries	651
watch	654
date.....	655

16 **RHCSA** دستورات، کدها، مثال ها و سناریوهای عملی اجرا شده در مدرک بین‌المللی لینوکس

ntp	657
Network Time Protocol Setup	658
DHCP Concepts, Installation and Configuration	662
Installation	663
Execution:	663
Configuration	680
Update /etc/sysconfig/dhcpd File	680
Execution:	681
Options	682
Leased Ip Address	683
IP Reservation	683
Scopes	684
DHCP Client Configuration	684
Simple Sample	685
Advanced Sample	685
Repository --Yum	691
GPG path	696
GPG	700
Manual Adding repo file	700
Automatic Creation	702
yum command	703
Chapter 5.....	705
Manage users and groups	705
Users, Group ,Permissions	705
user information	708
user cration	711
defaults:	711

Index	17
passwd	715
groups command.....	718
/etc/shadow Fields	718
Group Management	719
-G and -g : alternative and main groups.....	719
groupadd	719
groupdel	719
groupmod.....	719
gpasswd	719
Lock and Unlock Users.....	720
Permissions.....	721
umask	722
666 - umask : for files	724
777 - umask : for directories.....	724
chown OPTIONS user:group file_or_directory_name	724
sticky bit,suid , guid	725
Sticky Bit :-	726
SUID (setuid) :-.....	727
SGID (setgid) :-.....	728
su ,sudo	729
information about logged in users	737
last, lastb - show a listing of last logged in users.....	740
w	748
Chapter 6.....	753
Manage security.....	753
Firewall (Iptables).....	753
Graphical Configuration	753

define rules.....	760
iptables tables and chains	761
Diagram	764
Switches.....	765
Default Policy.....	766
writing Rules	766
Save and Restore	767
Statefull Packet Filtering.....	767
concepts	767
Load Modules	767
Redirect	768
Iptables examples.....	768
NAT Concepts	778
NAT Notable Examples	778
more security on ssh	785
/etc/hosts.deny and /etc/hosts.allow	787
SSH Passwordless Login Using SSH Keygen	790
SSH Tunneling for bypass filtering	794
SSH known_hosts and authorized keys	798
Server authentication	798
User authentication	799
Retrieve your SSH RSA fingerprint.....	800
Types of Access Control of files and processes	800
setfacl	801
MAC or Mandatory Acces Control Security	802
RBAC or Role Based Access Control Security.....	819
MLS or Multi Level Security	824
MCS or Multi Category Security	825

SELinux and LOGs	828
Disable selinux.....	828
SELINUXTYPE	830
Policy version updated after change	830
Logs of SELinux in SystemV Version (/var/log/messages)	832
Logs of SELinux in SystemD Version	832
SELinux Parameters	839
Samples	855
Context Switching or Labling(chcon, restorecon).....	857
chcon syntax	859
SELinux and Copying.....	861
Type Enforcement or TE	862
MCS	863
Assign Linux Users to SELinux Roles	864
Show Categories	864
Create Categories	865
Assign Groups to Users	866
Assign Categories to Files	867
Refrences	871
