

دستورات، کدها، مثال‌ها و سناریوهای  
عملی اجرا شده در مدرک بین‌المللی  
**Linux LPIC-2(201,202)**  
(به همراه نمونه سوالات آزمون)

مؤلف: مهندس سید حسین رجاء

## **Index**

<b><i>Course Objectives.....</i></b>	<b><i>31</i></b>
Objectives: Exam 201.....	31
Topic 200: Capacity Planning.....	31
200.1 Measure and Troubleshoot Resource Usage (weight: 6) .....	31
200.2 Predict Future Resource Needs (weight: 2) .....	33
Topic 201: Linux Kernel .....	33
201.1 Kernel components (weight: 2) .....	33
201.2 Compiling a Linux kernel (weight: 3) .....	34
201.3 Kernel runtime management and troubleshooting (weight: 4) .....	36
Topic 202: System Startup .....	38
202.1 Customising SysV-init system startup (weight: 3) .....	38
202.2 System recovery (weight: 4) .....	39
202.3 Alternate Bootloaders (weight: 2) .....	41
Topic 203: Filesystem and Devices.....	42
203.1 Operating the Linux filesystem (weight: 4).....	42
203.2 Maintaining a Linux filesystem (weight: 3).....	43
203.3 Creating and configuring filesystem options (weight: 2)	44
Topic 204: Advanced Storage Device Administration .....	45
204.2 Adjusting Storage Device Access (weight: 2) .....	46

204.3 Logical Volume Manager (weight: 3) .....	47
Topic 205: Networking Configuration.....	48
205.1 Basic networking configuration (weight: 3).....	48
205.2 Advanced Network Configuration (weight: 4).....	49
205.3 Troubleshooting network issues (weight: 4).....	51
Topic 206: System Maintenance .....	53
206.1 Make and install programs from source (weight: 2).....	53
206.2 Backup operations (weight: 3).....	54
206.3 Notify users on system-related issues (weight: 1) .....	55
Objectives: Exam 202.....	56
Topic 207: Domain Name Server .....	56
207.1 Basic DNS server configuration (weight: 3) .....	56
207.2 Create and maintain DNS zones (weight: 3) .....	57
207.3 Securing a DNS server (weight: 2) .....	58
Topic 208: Web Services.....	60
208.1 Basic Apache configuration (weight: 4) .....	60
208.2 Apache configuration for HTTPS (weight: 3).....	61
208.3 Implementing Squid as a caching proxy (weight: 2) .....	63
208.4 Implementing Nginx as a web server and a reverse proxy (weight: 2) .....	64
Topic 209: File Sharing .....	64
209.1 Samba Server Configuration (weight: 5).....	64
209.2 NFS Server Configuration (weight: 3).....	66
Topic 210: Network Client Management .....	67
210.1 DHCP configuration (weight: 2) .....	67
210.2 PAM authentication (weight: 3).....	68
210.3 LDAP client usage (weight: 2) .....	69
210.4 Configuring an OpenLDAP server (weight: 4).....	69

## **Index**

## **5**

Topic 211: E-Mail Services .....	71
211.1 Using e-mail servers (weight: 4).....	71
211.2 Managing Local E-Mail Delivery (weight: 2) .....	72
211.3 Managing Remote E-Mail Delivery (weight: 2).....	73
Topic 212: System Security .....	73
212.1 Configuring a router (weight: 3) .....	73
212.2 Managing FTP servers (weight: 2) .....	75
212.3 Secure shell (SSH) (weight: 4).....	75
212.4 Security tasks (weight: 3) .....	77
212.5 OpenVPN (weight: 2).....	78
<b><i>Chapter 1</i></b> .....	<b>79</b>
<b>Capacity Planning</b> .....	<b>79</b>
netstat command.....	79
Information about logged in users.....	96
last, lastb - show a listing of last logged in users.....	99
w .....	107
Process .....	111
ps command .....	116
background and foreground process .....	122
kill.....	123
pgrep.....	124
Priority in process .....	131
nice .....	137
statistics in memory .....	138
free .....	138
vmstat .....	141
fuser -- identify processes using files or sockets .....	145

lsof -- list open files .....	150
<b>Chapter 2 .....</b>	<b>159</b>
<b>Linux Kernel.....</b>	<b>159</b>
modules --remove needs for recompiling kernel .....	159
lsmod .....	159
modprobe --search and install modules.....	160
How To Compile A Kernel - The CentOS Way .....	162
<b>Chapter 3 .....</b>	<b>175</b>
<b>System Startup.....</b>	<b>175</b>
Boot Sequence .....	175
Run Levels .....	178
cat /etc/inittab .....	178
Sample:.....	183
service start   stop   restart   .....	190
tty.....	190
shells .....	191
rc.sysinit.....	193
fstab.....	193
rc.local.....	194
etc/X11/prefdm.....	195
/boot directory.....	196
Runlevels.....	199
/etc/inittab .....	200
actions:.....	201
services and runlevels.....	201
type of services .....	204

## **Index**

**7**

pstree .....	205
same user and group id.....	205
reboot ,halt , poweroff.....	205
shutdown switches.....	208
<b>Chapter 4 .....</b>	<b>209</b>
<b>Filesystem and Devices.....</b>	<b>209</b>
File system, Devices, Partitions .....	209
Important Expressions .....	209
1.inode .....	209
2.character device and block device .....	211
3.file system in linux .....	211
4.Ext2: fast symbolic links .....	211
5.swap fs .....	211
6.proc fs .....	211
7.Journaling-->LOG .....	211
8.fsk .....	211
9.ext3,jfs, Reiserfs has Journaling .....	211
10.ReiserFS -->slow .....	211
11.XFS: High Volume Capacity, B+Tree, .....	211
12.EXT3: ext2fs + Journaling.....	211
13.Network FS: NFS, SMB .....	211
14.Encrypted Fs.....	211
15.windows partitions: vfat , ntfs .....	211
16.ext2,ext3,ext4 Diffrencess .....	211
17.Superblock .....	211
mount and umount .....	212

18.virtual fs : procfs , sysfs , tmpfs ,...--in ram and after restart	
viped .....	214
19. /etc/fstab .....	214
mount command .....	215
mount -t TYPE device/directory mount_point.....	217
Syntax.....	223
For CDROM.....	223
umount busy: fuser , lsof .....	223
Manual of mount.....	223
/etc/fstab .....	233
/etc/mtab --current mounter fs .....	234
fdisk .....	235
Primary and Extended.....	238
switches .....	238
4 Primary partitions --> Extended: logical .....	238
add third hard :sdc .....	238
Parted.....	262
df.....	265
UUID .....	267
SuperBlock .....	269
fsck .....	272
alternative super block .....	275
exit status.....	276
auto fsck .....	276
create swap file .....	276
create swap partition.....	279
in memory system files: temporarily and delete after reboot	280
Backup MBR .....	281

<b>Index</b>	<b>9</b>
<b>Chapter 5 .....</b>	<b>283</b>
<b>Advanced Storage Device Administration .....</b>	<b>283</b>
LVM Concepts .....	283
lvm in installation.....	283
lvm with commands .....	292
display information .....	294
Create physical volume .....	295
Get information about Volume Group .....	297
Create Volume Group .....	299
Get information about Logical Volume.....	302
Create file system on logical volume.....	310
Increase size .....	316
Reduce Size .....	319
Device Mapper: map block device to virtual block.....	328
add to fstab .....	330
Raid Concepts .....	332
Types of RAID .....	332
mdadm .....	338
RAID0 Implementation:.....	338
partitionning.....	338
create raid device .....	339
show detail .....	339
make file system.....	339
mounting .....	340
status .....	340
<b>Chapter 6 .....</b>	<b>361</b>
<b>Networking Configuration .....</b>	<b>361</b>

**10** دستورات، کدها، مثال ها و سناریوهای عملی اجرا شده در مدرک بین المللی (201,202) LPIC-2

ping command .....	361
network configuration .....	375
sshd ,sftp,scp .....	390
mount cifs and ssh partitions .....	393
/etc/resolv.conf.....	399
set proxy .....	400
route .....	400
Default gateway .....	401
Cached routes .....	402
ip forward .....	404
static route .....	406
download from cmdline .....	406
netstat command.....	407
-r, --route        display routing table .....	416
/etc/hosts.....	426
Nmap .....	426
tcpdump .....	441
LOG in Linux.....	446
important log file .....	449
messages .....	450
utmp .....	461
wtmp.....	461
last, lastb.....	461
dmesg .....	461
logrotate service.....	463
syslog server .....	469
My sample of syslog .....	473

<b>Index</b>	<b>11</b>
<b><i>Chapter 7</i></b> .....	<b>475</b>
<b>System Maintenance .....</b>	<b>475</b>
installation Types: .....	475
table of extentions .....	475
tar.....	476
install from source code package .....	476
install from rpm.....	476
switches .....	476
Example: .....	477
verify package .....	482
tar.....	482
zip and unzip.....	485
--zip level.....	485
Notify users on system-related issues .....	487
/etc/issue .....	487
/etc/issue.net.....	487
/etc/motd .....	487
Special Charactes: .....	489
<b><i>Chapter 8</i></b> .....	<b>493</b>
<b>DNS and DHCP .....</b>	<b>493</b>
DNS Concepts.....	493
Why we need DNS Server? .....	493
Withot DNS Server .....	493
Zone files and DNS Server.....	494
how dns works .....	497
DNS Cofiguration .....	517
My Testing Environment: .....	517

**12 دستورات، کدها، مثال ها و سناریوهای عملی اجرا شده در مدرک بین المللی (201,202) LPIC-2**

Requirement Packages:.....	518
Configuration Files Used:.....	518
Port & Protocols Used:53, UDP .....	518
Setup Master DNS Server .....	518
Installing and Configuring Bind .....	528
Following are the explanation of each configuration we used in above file. ....	532
Start the named service and make it persistent. ....	544
Finally, test the configured Master DNS zone files (forward and reverse), using dig & nslookup tools. ....	545
For Reverse Query .....	547
Setup Slave DNS Server .....	549
Configure Client Machine .....	553
Understaing the dig Output: .....	554
Chroot and Jail Bind DNS Server.....	556
DHCP Concepts, Installation and Configuration.....	574
Installation .....	574
Execution: .....	574
Configuration .....	591
Update /etc/sysconfig/dhcpd File .....	591
Execution: .....	592
Options.....	594
Leased Ip Address .....	594
IP Reservation .....	595
Scopes .....	595
DHCP Client Configuration .....	596
Simple Sample.....	596
Advanced Sample .....	597

<b>Index</b>	<b>13</b>
<b><i>Chapter 9</i></b> .....	<b>603</b>
<b>Web Services</b> .....	<b>603</b>
Installing and Configuring Apache 2.x .....	603
Installation on Fedora23.....	606
HTTP port:80.....	615
HTTPS port:443 .....	615
html and php files .....	616
configuration files .....	616
user and group apache.....	617
configuration file: httpd.conf .....	617
Access Control in Apache 2.x.....	683
Access control by host .....	683
Apache Module mod_access_compat.....	687
Allow Directive .....	689
Deny Directive.....	693
Order Directive.....	694
Satisfy Directive .....	698
<Limit> Directive.....	700
<LimitExcept> Directive.....	702
Execution: .....	703
First Test: .....	703
Second Test: .....	706
Allow and Deny Examples.....	722
Virtual Hosting and Name Virtual Host.....	723
Execution: .....	724
Some other Directives and Options .....	726
Apache MPM prefork .....	726

MaxSpareServers Directive .....	728
Apache MPM worker .....	729
KeepAlive Directive .....	733
KeepAliveTimeout Directive .....	734
MaxKeepAliveRequests Directive .....	735
<DirectoryMatch> Directive .....	736
ErrorLog Directive .....	738
LogLevel Directive .....	740
ErrorLogFormat Directive .....	743
<Files> Directive .....	748
<FilesMatch> Directive .....	750
<IfDefine> Directive .....	752
<IfModule> Directive .....	754
LimitRequestBody Directive .....	755
LimitRequestFields Directive .....	757
LimitRequestFieldSize Directive .....	759
LimitRequestLine Directive .....	760
LimitXMLRequestBody Directive .....	761
<Location> Directive .....	762
<LocationMatch> Directive .....	766
SetHandler Directive .....	768
<VirtualHost> Directive .....	770
AllowOverride and AccessFileName .....	773
AccessFileName Directive .....	773
AllowOverride: .....	774
Execution: .....	779
Options Directive .....	786
Enable Authentication for some folders .....	792

Authentication and Authorization .....	793
Introduction.....	795
The Prerequisites .....	796
Getting it working .....	797
Letting more than one person in .....	801
Possible problems .....	802
Alternate password storage .....	803
Using multiple providers .....	804
Beyond just authorization.....	806
Authentication Caching.....	810
More information .....	810
Execution: .....	811
How to Create Self-Signed SSL Certificates and Keys for Apache on RHEL/CentOS 7.0 .....	821
Step 1: Install and Configure Apache SSL .....	821
Step 2: Create SSL Certificates and Keys .....	826
Apache with SSL (HTTPS) For CentOS 6.5 and later .....	840
Squid Concepts.....	859
Some Squid Directives and Options .....	860
Option Name: ..... access_log	
.....	860
Option Name: ..... cache_dir	
.....	864
Option Name: ..... cache_mem	
.....	869
Option Name: ..... cache_mgr	
.....	871

**16 LPIC-2 (201,202) دستورات، کدها، مثال ها و سناریوهای عملی اجرا شده در مدرک بین المللی**

Option Name: .....cache_peer	
.....	871
Option Name: .....cache_peer_access	
.....	889
Option Name: .....http_access	
.....	891
Option Name: .....maximum_object_size	
.....	894
Option Name: .....refresh_pattern	
.....	895
Squid Installation and Configuration .....	899
Install squid proxy : .....	900
Troubleshooting :.....	913
Configure squid proxy as web filter:.....	914
Restricting Access to specific keywords : .....	918
Restricting Access to specific Ipaddress : .....	923
Allow Full access to specific Ipaddress : .....	927
Changing squid proxy port number .....	929
Restricting Download size : .....	929
Squid as Transparent Proxy.....	931
<b>Chapter 10 .....</b>	<b>935</b>
<b>File Sharing.....</b>	<b>935</b>
NFS Server Configuration.....	935
NFS Concepts .....	935
NFS Installation .....	935
Server configuration .....	936
/etc(exports.....	936

## **Index**

## **17**

Client configuration.....	936
For fstab.....	937
Firewal configuration for nfs .....	938
nfs port .....	944
portmap port .....	945
nfsstat .....	947
Samba Sharing .....	969
Samba Features.....	969
Samba 3.x Provides: .....	969
Samba emulates Windows Servers Using SMB protocol .....	969
Samba pakages.....	970
Includes daemons: .....	970
1.smbd TCP (139/445(CIFS)).....	970
2.nmbd UDP (137/138) - Netbios Name Registration/Sessions .....	970
3.winbind- mapping of users/groups between Linux/Unix and Windows(AD) .....	970
Execution: .....	970
Browsing .....	977
*=DMB (Domain Master Browser) : collating browse list for entire subnets (multiple) --usually the pdc.....	977
+LMB (Local Master Browser) : collating browse list for given subnet .....	977
Execution: .....	977
Note: Netbios name are 16 characters in length and this name can get from broadcast address or WINS Server that contains netbios name database. ....	981
Examples:.....	982

**18      LPIC-2 (201,202) بین المللی**

Key Client Utilities: .....	983
1. smbtree - network neighborhood text utility .....	983
Execution: .....	983
Important Note: for seeing shares you must enable guest user.	
.....	986
2. smbclient - provides an FTP-like interface to SMB/CIFS servers	
.....	999
Note: Most, if not all, Samba clients operate in case-insensitive mode.....	1000
Note: when in smbclient interactive mode, prefix commands with '!' to execute locally on client, otherwise commands run on server .....	1000
Execution: .....	1001
smbget .....	1011
Note: if had error update bellowing file:.....	1012
name resolve order (G) .....	1012
3. smbtar - facilitates backups of remote shares .....	1014
Execution: .....	1014
mount cifs and ssh partitions .....	1014
Enter your Windows username and password in the file:....	1017
Mount during login instead of boot .....	1018
Slow shutdown due to a CIFS/Network Manager bug.....	1019
Installing SSHFS On Ubuntu/Debian .....	1019
Note: if cifs module not installed do this:.....	1020
Join Netbios WORKGROUP .....	1021
Note: change browseable = no to yes to browse /root directory in smb.conf.....	1024
WINS Clint .....	1026

## Index

19

Install wins server in winsows server .....	1026
Samba Name resolution order:.....	1026
Share Level Security .....	1027
Execution: .....	1027
# A publicly accessible directory, but read only, except for people in the "root" group.....	1029
# A publicly accessible directory, but read only, except for people in .....	1029
Execution on Windows:.....	1033
public read .....	1033
public write .....	1034
private write:Mixed: Share Level and User Level Security ...	1035
Hidden Share .....	1037
Print - share level security .....	1040
Note: after adding printer run: .....	1042
SWAT .....	1046
Execution: .....	1046
Note:swat contorolled by xinetd .....	1046
Note: set disable = no in swat file .....	1057
##### Global Section .....	1058
realm (G) .....	1058
guest account (G).....	1059
public .....	1059
guest ok (S).....	1060
only guest.....	1060
guest only (S) .....	1060
write list (S) .....	1061
valid users (S) .....	1061

hosts allow (S) .....	1062
os level (G) .....	1064
local master (G) .....	1065
domain master (G) .....	1065
#####Global advanced config.....	1067
map to guest (G).....	1067
create mask (S).....	1069
security mask (S).....	1070
directory mask (S) .....	1071
smb ports (G) .....	1072
Note : another way getting pid of nmb and smb processes .	1072
##### Swat shares .....	1073
admin users (S).....	1073
read list (S) .....	1074
force user (S).....	1074
